Contents of this file

1. Figures S1-S2

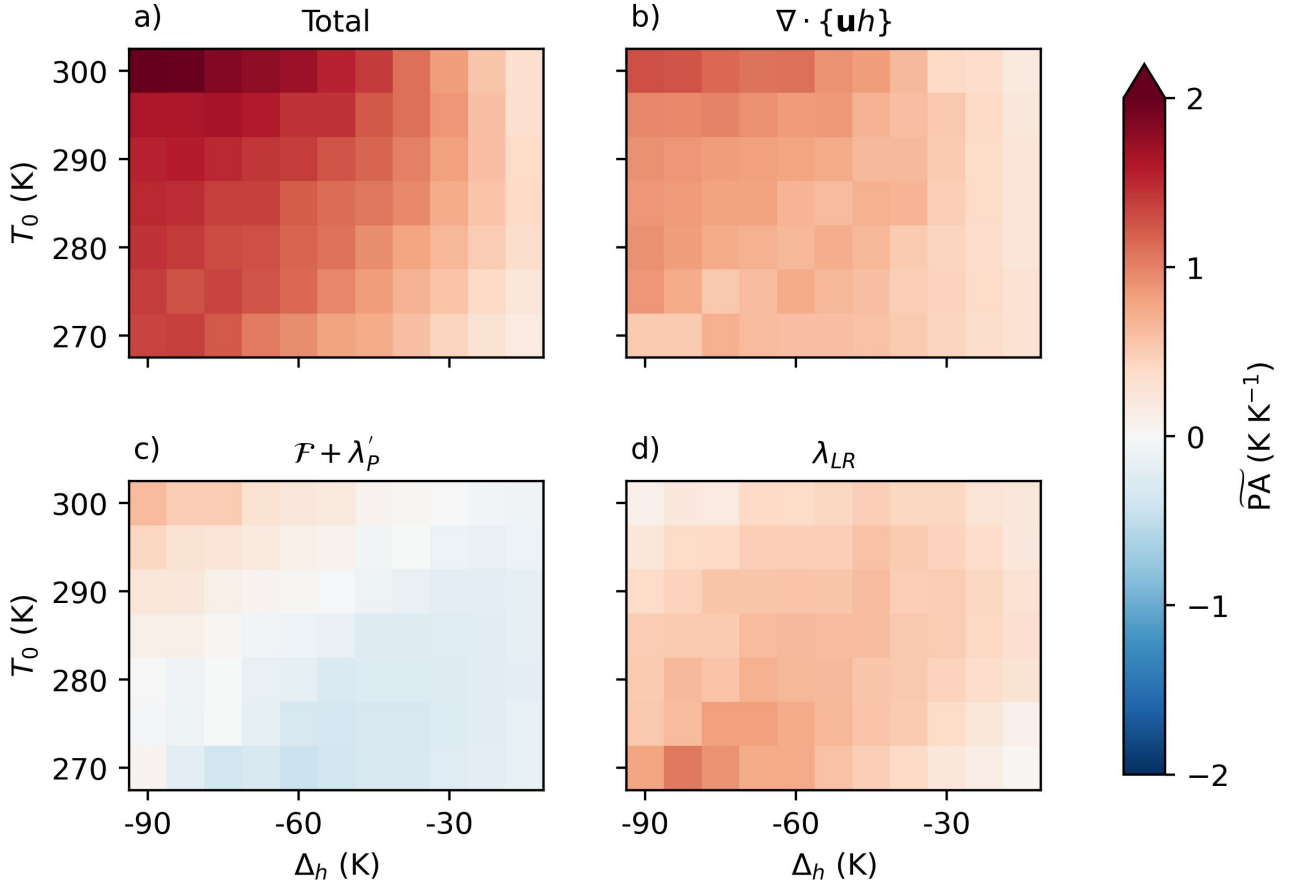

Figure S1. As in Figure 3 of the main text, but now panel (b) shows the contribution to $\widetilde{\text{PA}}$ from the total changes in atmospheric energy transport, and panel (c) shows the combined contribution from radiative forcing and the spatially-varying Planck feedback.

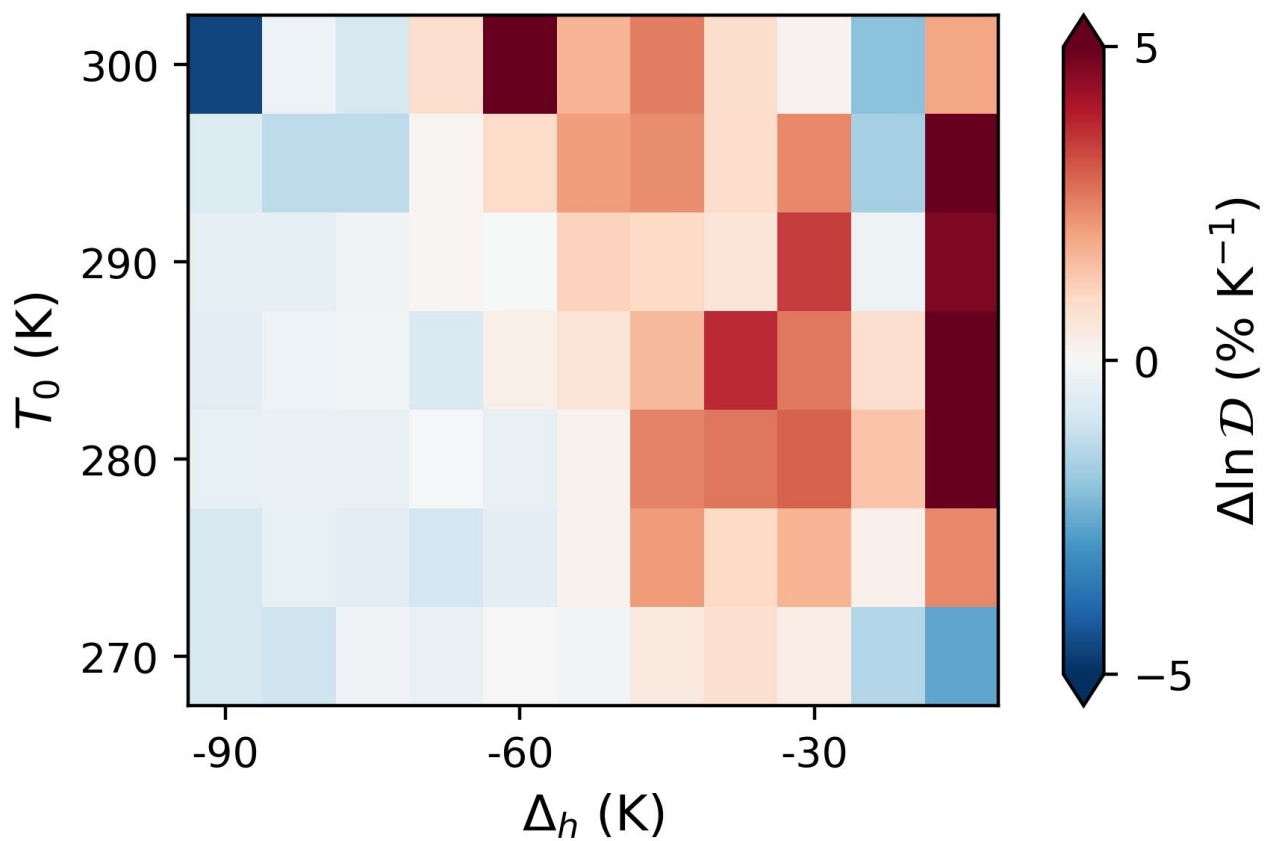

Figure S2. State-dependence of fractional changes in the globally-averaged diffusivity, \mathcal{D} , with warming.
