1. Figures S1-S2

July 18, 2025, 1:53pm

Figure S1. As in Figure 3 of the main text, but now panel (b) shows the contribution to $\widetilde{\text{PA}}$ from the total changes in atmospheric energy transport, and panel (c) shows the combined contribution from radiative forcing and the spatially-varying Planck feedback.
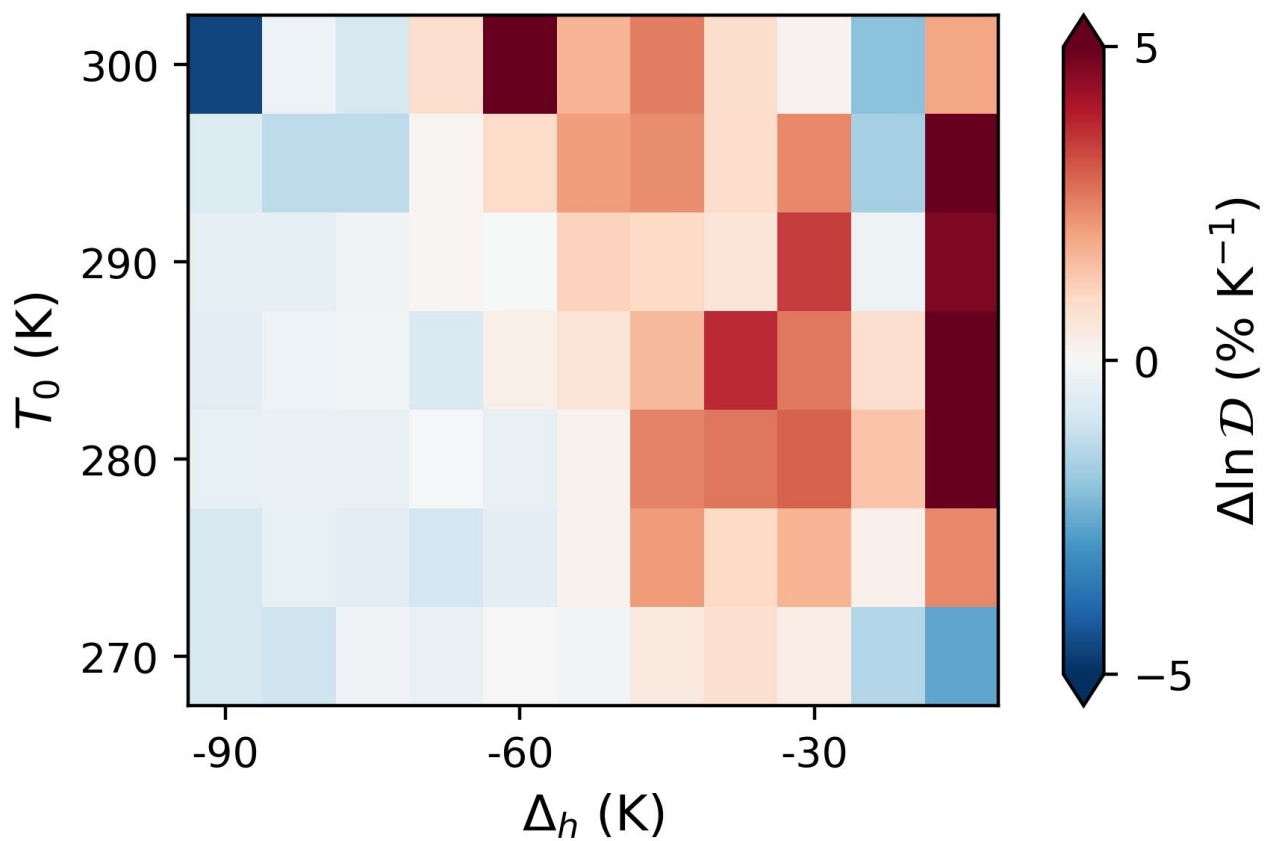

Figure S2. State-dependence of fractional changes in the globally-averaged diffusivity, $\mathcal{D}$, with warming.
